Study Program : Business Law
Title : User's Data Protection Law Regarding Online Game

The times are happening all over the world so rapidly, one of which is information technology. One of the things related to information technology is online games. This rapid development has resulted in changes in the game from consoles, computers, to mobile in the form of smartphones. This has an effect on service providers and service users of online games, the race to establish online games continues to flourish in Indonesia. With an estimated 270,000,000 population in Indonesia, this effect causes several irresponsible parties to use personal data from users of online game services for illegal actions. The action is in the form of the phishing, hacking, so the Protection of Personal Data from service users is needed in the community. The Indonesian government hereby negotiated the Draft Law on the Protection of Personal Data with the aim of protecting the Indonesian people from the things mentioned above. The author hopes that protection of personal data in Indonesia could be overcome optimally with the Government of Indonesia.
