Title : *Difable Friendly Creative Hub Design with Inclusive Architecture Approach in West Jakarta*

Creative Hub is a building typology that is engaged in the creative industry. Creative Hub also a public building built by the government to support the creative's industry. In general, buildings for public must be accessible to everyone without exception, but buildings for public provided by the government are still inadequate for everyone, especially people with disabilities. In the design of this final project, there is an issue with the gap between persons with physical disabilities (wheelchairs) and non-disabled persons, so there is often a gap between the two. The inclusive approach become a standard of comfort that will have to achieve in the design of this Creative Hub. one of the inclusive approach help to support people with physical disabilities and people with a wheel chair will be able to move comfortably in the building. The design will use ramps, differences in building height levels, the width or area of the space to be used so that wheelchair users can rotate, use of furniture in buildings, and so forth so can achieve inclusive approach. The design of this Creative Hub can cover about eight sub-sectors such as fields of architecture, interior, photography, woodworking, fashion, music, radio, and performing arts.

Keywords: Inclusion, Creative Hub, Persons with Disabilities
